AI Interview Assessment Report

Mohamad Fahmy Iqbal

Interview for
Junior AI Developer

43%
Overall Suitability Score

Assessment Date
2026-10-17 02:00:00

THE GLOBAL BUSINESS GROUP

INTERVIEWER.AI

Overall Suitability Score 43/100

The candidate brings a strong technical background with over 8 years of experience in software engineering and infrastructure management, which exceeds the entry-level requirement for the Junior AI Developer role. Their expertise in fullstack development and scalable backend systems suggests a solid foundation in software development fundamentals. However, the interview responses indicate limited direct experience with AI coding agents and related AI-powered development tools, which are central to the role. The candidate demonstrates a logical approach to troubleshooting and a willingness to verify AI-generated code, aligning with key job expectations. Communication during the interview was hesitant and somewhat fragmented, which may impact clarity in technical documentation and team collaboration. Overall, while technically proficient, the candidate would benefit from focused upskilling in AI coding agents and improving communication skills to fully meet the role's demands.

Strengths

- Extensive professional experience in software development and infrastructure, providing a strong technical foundation.
- Demonstrated practical troubleshooting skills by verifying AI-generated code and systematically identifying bugs in their project.
- Shows a methodical approach to validating AI outputs against official documentation and design standards.
- Expressed flexibility and willingness to adapt work hours to team needs, indicating potential for good collaboration.
- Experience with backend systems and monitoring tools relevant to maintaining reliable software platforms.

Areas of Improvement

- Limited direct experience with AI coding agents such as Claude Code or OpenCode Codex, which are critical for the role.
- Communication skills during the interview were hesitant and fragmented, potentially impacting clarity in technical writing and team interactions.
- Lack of experience working in international or distributed teams, which may affect coordination in a multi-developer environment.
- Responses occasionally lacked technical depth and clarity, making it difficult to fully assess their problem-solving approach.
- No explicit mention of familiarity with Git workflows, CI pipelines, or version control practices required by the job.

THE GLOBAL BUSINESS GROUP

INTERVIEWER.AI

AI Video Score 43/100

AI Interview Summary

During the interview, the candidate acknowledged a lack of experience working in international teams but expressed flexibility regarding work hours and team collaboration. They described a recent project involving a network monitoring and security system using an 'anti-graffiti' agent, highlighting their hands-on troubleshooting process by checking AI-generated code and fixing bugs. The candidate emphasized verifying AI outputs against documentation and design specifications before implementation, demonstrating a methodical approach. However, their verbal responses were marked by frequent pauses and unclear phrasing, which somewhat obscured their technical explanations.

43%
AI Video Score

28%

1 Response Relevancy

Measuring the relevancy of the content as mentioned by the candidate in their video responses. The questions follow a structured-interview technique where each question is designed to assess a skill using a behavioral and situational interview question. The Generative AI measures the relevancy of the response to the said question.

52%

2 Professionalism

It is measured from the applicant's behavior (formal/informal) and looks at how the candidate presents himself/herself in the video. It also measures where eye contact is maintained during the video response, captures if there is any fidgeting at all. Yes, dressing formally would be advantageous.

33%

3 Positive Attitude

Attitude, as the name suggests, looks for sentiments along with a combination of energy and emotion. This model looks at a combination of metrics from communication and Sociability (for e.g. confident, encouraged, positive).

49%

4 Communication Skills

This is primarily measuring the applicant's clarity of speech. It also looks at verbal communication fluency and modulation of speech. Speaking clearly and with the right pace would be advantageous here. Variation in spoken pitch at appropriate times throughout the video would be beneficial.

56%

5 Sociability

This AI model is more focused on scoring applicant's sentiments, using how the candidate communicates and shows positive interpersonal skills and tactfulness. It usually looks for positive sentiment words and energy levels of an applicant.

AI Video Score 43/100

1 Response Relevancy 28%

Measuring the relevancy of the content as mentioned by the candidate in their video responses. The questions follow a structured-interview technique where each question is designed to assess a skill using a behavioral and situational interview question. The Generative AI measures the relevancy of the response to the said question.

Question	Score
Have you worked with international teams or across time zones before? How do you manage communication and scheduling in that context?	40%
Can you tell us about a project you have built or worked on using AI coding agents? What did you build, which tools did you use, and what was your role in the process?	30%
Which AI coding tools or agents have you used? How do you verify that the code they generate is correct?	30%
Imagine an AI coding agent repeatedly fails to fix a bug in your project. How would you investigate the issue, identify the root cause, and work towards a reliable solution?	10%
Average relevancy score	**28%**

AI Video Score 43/100

2 Professionalism 52%

It is measured from the applicant's behavior (formal/informal) and looks at how the candidate presents himself/herself in the video. It also measures where eye contact is maintained during the video response, captures if there is any fidgeting at all. Yes, dressing formally would be advantageous.

Parameter	Score	Reasoning
Dressing	**45**	This refers to your appropriateness and formality during the video interview. Your choice of clothing has a direct impact on this metric. This detects how formally you are dressed, so choose the right attire for the interview.
Grooming	**50**	This metric is focused on your hair tidiness, appropriate for video, during the video interview. Ensure you are well groomed for the interview.
Body Language	**60**	It is important to focus on body movement when we speak. The right amount of body gestures can be helpful to achieve a great score in this metric. This metric focuses on non-verbal gestures and communication through use of hands, shoulders, etc.

3 Positive Attitude 33%

Positive Attitude reflects the combination of energy and emotion conveyed through recorded responses to structured interview questions. This measure evaluates behavioral cues that indicate presence, confidence, encouragement, and optimism, providing insight into how the individual approaches challenges and presents themselves in professional scenarios. Observable examples include expressing enthusiasm, maintaining a confident tone, offering constructive viewpoints, and projecting optimism in responses.

INTERVIEWER.AI

AI Video Score 43/100

4 Communication Skills

49%

This is primarily measuring the applicant's clarity of speech. It also looks at verbal communication fluency and modulation of speech. Speaking clearly and with the right pace would be advantageous here. Variation in spoken pitch at appropriate times throughout the video would be beneficial.

Parameter	Definition	Score	Reasoning
Clarity	Ability to clearly express ideas so the listener easily understands	30	The candidate's responses are difficult to understand due to frequent use of filler words ('uh'), incomplete sentences, and unclear phrasing. The ideas are not clearly expressed, making it hard for the listener to grasp the intended meaning.
Articulation	Correct pronunciation and distinct enunciation of words	40	While the candidate pronounces some words correctly, the frequent hesitation and filler sounds disrupt the flow and clarity of speech. Enunciation is inconsistent, which affects the distinctness of words.
Grammar	Correct use of English grammar and sentence construction	23	The candidate's grammar is poor, with multiple errors in sentence structure, verb tense, and article usage, as reflected in the provided score.
Vocabulary	Variety and relevance of vocabulary for academic settings	35	The vocabulary used is limited and repetitive, with some technical terms attempted but often misused or unclear. There is little variety or precise academic language.
Language Proficiency	Overall fluency, comprehension, and idiomatic use of language	30	Overall fluency is low due to frequent pauses and filler words. Comprehension appears limited, and idiomatic or natural language use is minimal.
Coherence	Organized structure in responses, ideas connected logically	25	Responses lack logical flow and organization. Ideas are fragmented and loosely connected, making it difficult to follow the candidate's line of thought.

AI Video Score 43/100

4 Communication Skills 49%

This is primarily measuring the applicant's clarity of speech. It also looks at verbal communication fluency and modulation of speech. Speaking clearly and with the right pace would be advantageous here. Variation in spoken pitch at appropriate times throughout the video would be beneficial.

Parameter	Definition	Score	Reasoning
Engagement	Positive and engaging delivery, appropriate enthusiasm for subject	35	The candidate shows some willingness to answer but lacks enthusiasm or positive energy. The delivery is hesitant and does not engage the listener effectively.
Conciseness	Staying on-topic, providing only essential, relevant details	40	The candidate often repeats words and filler sounds, which detracts from conciseness. However, the answers do not stray far off-topic.
Professionalism	Level of formality and suitability for an academic interview	30	The informal tone, excessive hesitation, and lack of polished language reduce the professionalism expected in an academic interview setting.

THE GLOBAL BUSINESS GROUP

INTERVIEWER.AI

AI Video Score 43/100

5 Sociability 56%

This AI model is more focused on scoring applicant's sentiments, using how the candidate communicates and shows positive interpersonal skills and tactfulness. It usually looks for positive sentiment words and energy levels of an applicant

Parameter	Score	Reasoning
Emotion	79	Facial expression state; maintain positive or neutral expression.
Sentiment	54	Positive sentiment; word choices reflecting positive energy.
Energy Levels	33	This metric is focused on your energy level during the video interview. Ensure you are well groomed for the interview.

IMPORTANT TO NOTE

Purpose of the Report

This Video Interview Assessment Report is designed as a personal development tool for job seekers. It provides a detailed evaluation of your hireability based on two key assessments:

1. **Skills Assessment – evaluating your core competencies.**
2. **Video Interview Performance – assessing communication, presentation, and other relevant attributes.**

Using Interviewer.AI's advanced AI-driven scoring system, the assessment offers objective, consistent, and unbiased evaluations that are applicable across various cultures and age groups.

How to Use This Report

- Review Your Results: Reflect on your strengths and identify areas that require improvement.
- Act on Recommendations: Use the feedback to develop specific skills and enhance your overall employability.
- Track Your Progress: Reassess periodically to monitor growth and readiness for job opportunities.

Score Color Indicators used in this Report

Red (0-40) Poor - Indicates areas requiring significant improvement

Yellow (41-79) Average - Shows satisfactory performance with room for enhancement

Green (80-100) Excellent - Demonstrates strong competency in this area

Confidentiality & Disclaimer

- This report is strictly confidential and intended for the candidate's personal use only.
- No part of this report may be copied, shared, or reproduced without prior written permission from Interviewer.AI.
- The results are based solely on your video interview responses and analyzed using AI scoring models, summarized into high-level skill categories.
- While your individual results remain private, anonymized data may be used for product enhancement and research.
- Interviewer.AI reserves the right to interpret and clarify the assessment results.
